

Gymso Fitness

A static website present the brand of a modern fitness center.

It can be used by gyms or trainers to showcase schedules, classes, and contact info online.

Developed by

Mayileshwaran D

Introduction

Gymso Fitness is a sleek, modern fitness website designed using only **HTML** and **CSS**. The project is built to showcase a fitness center's offerings, trainers, and contact information in a clean and professional layout. Without any JavaScript or back end integration, this static website focuses entirely on design, structure, and responsiveness.

Project Overview

This project is designed to serve as a digital presence for any fitness studio or personal trainer. The main objective is to highlight the gym's brand, build trust through visual design, and offer clear navigation through its core sections like services, schedules, and contact info. The layout and content flow are carefully crafted to reflect a modern, active, and goal-driven fitness brand.

Target Audience

- **Students and Young Adults** who are beginning their fitness journey and want to stay active.
- **Young professionals** who are looking for flexible workout schedules and modern training programs.
- **College and school students** who are motivated by clean, trendy, and easy-to-navigate websites that offer quick access to class details and trainer information.

Tools Used

- **Visual Studio Code (VS Code)** – Code editor for writing and managing the project
- **Google Fonts** – For custom web typography
- **Font Awesome** – For icons to enhance visual appeal
- **GitHub** – For version control and project hosting (if deployed)

Programming Languages

- **HTML5** – To structure all the page content
- **CSS3** – For styling, layout control, and responsiveness

Key Features

- **Responsive Layout** – Website adjusts beautifully across mobile, tablet, and desktop screens.
- **Navigation** – Simple, fixed header with anchor links for smooth page jumps.
- **Clean UI** – Balanced design with modern fonts, spacing, and color scheme.
- **Section-based Design** – All the pages divided into sections like Hero section, Main content sections and Footer section.

Pages

- **index.HTML(Home)** – Landing page with gym intro, banner, and highlights
- **about.HTML** – Information about the gym's mission, trainers, and background
- **contact.HTML** – Layout for contact form, gym location, and social links
- **schedules.HTML** – Timetable layout for weekly classes and trainer schedules
- **classes.HTML** – Overview of fitness classes offered (card or list format)

Conclusion

The **Gymso Fitness Website** is a strong example of how a static website can be both elegant and functional using only **HTML and CSS**. It demonstrates a good understanding of layout, responsiveness, and clean web design principles.
